Take positive steps to ensure your facility is protected from BioSecurity and cross contamination hazards.

Simple, practical and efficient – Technix Boot Dip Mat™ offers effective security from unwelcome and potentially dangerous contaminants.

It is not possible for us to monitor or control where visitors to our facilities have been previous to reaching our facility. It is possible however to take effective and simple steps to reduce the risk of cross contamination and provide an effective barrier. It is not just visitors! – Family members and employees etc. could inadvertently 'walk in' dangerous organisms that put your facility at risk.

Place a Technix Boot Dip Mat™ at every entrance to your barns, stables and parlor and don't forget to put one by your office door! Boot Dip Mat™ offers an inexpensive, non-invasive yet highly effective barrier to help ensure the overall health of your most valuable commodity – your livestock!

Boot Dip Mat's moulded rubber construction offers a robust, highly durable product. The 2" side walls house thousands of rubber scraper teeth over which you pour your disinfectant.

Simply walk into the mat, scrape your boots over the thousands of rubber teeth and let the disinfectant wash over the bottom & sides of the boots and then step out.
